PROFESSIONAL SUMMARY

Computer Science & Artificial Intelligence undergraduate (B.Tech, expected 2028, CGPA 9.4/10) with a strong C++/DSA foundation and hands-on full-stack development across the MERN stack. Built real-world applications involving backend engineering, authentication, concurrency-safe booking, REST APIs, rate limiting, Redis caching, and AI/ML integration (OpenRouter, SSE streaming). Seeking software engineering / full-stack developer internship roles.

EDUCATION

Arya College of Engineering & IT, Jaipur

Expected 2028

B.Tech — Computer Science & Artificial Intelligence | CGPA: **9.4/10**

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, Web Development, Compiler Design

TECHNICAL SKILLS

Languages: C++, JavaScript, SQL, HTML, CSS

Frameworks / Development: React.js, Node.js, Express.js, REST APIs, React Query

Databases / Backend: MongoDB, Mongoose, Redis, JWT Authentication

AI / APIs: OpenRouter, AI/ML Integration, Server-Sent Events (SSE)

Tools / Engineering: Git, GitHub, Docker, Linux, VS Code, Postman

Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

PROJECTS

MediQueue — Clinic Appointment & Queue Management System

Tech Stack: MERN, MongoDB, React, Node.js, Express, JWT, React Query

- Built a full-stack clinic management platform with dedicated Admin, Staff, Doctor, and Patient portals covering appointment booking, live queue tracking, rescheduling, consultation workflows, patient history, clinical notes, and clinic administration.
- Implemented race-safe appointment booking using server-side slot validation and a partial unique MongoDB index so simultaneous requests cannot hold the same active slot.
- Engineered a server-enforced appointment state machine (SCHEDULED → WAITING → IN_CONSULT → COMPLETED) with role-based authorization, per-record ownership checks, status history, and JWT session revocation.
- Calculated queue position and estimated wait times from queue state and consultation history, added rate limiting and hardened HTTP security headers, and built an end-to-end verification suite with **67/67 checks passing**.

Orbit AI — Full-Stack AI Conversation Workspace

Tech Stack: React, Node.js, Express, MongoDB, Redis, OpenRouter, Docker

- Developed a full-stack AI conversation workspace with persistent chats, conversation context, summarization, model selection, and OpenRouter-based AI model access.
- Implemented Redis-backed request rate limiting (20 requests/minute per user) and token quotas (10,000 tokens per 5-hour window) with atomic quota reservations and expiring Redis locks for summary concurrency.
- Secured the app with cookie-based JWT authentication and server-side session revocation, and implemented Server-Sent Events (SSE) for streaming AI responses with abortable Stop/Retry behavior.
- Added provider request timeouts and retry handling, model allow listing, message validation and ownership checks, CORS and security headers, health/readiness endpoints, graceful shutdown, MongoDB transactions for paired persistence, and Docker-based setup.

HACKATHONS & TECHNICAL ACTIVITIES

- Participated in team-based hackathon projects addressing real-world problem statements, including **RailQR-Mark** (railway QR/laser marking) at Smart India Hackathon.
- HackNexus 2026** — Hackathon Participant

CERTIFICATIONS & ACHIEVEMENTS

- NPTEL — Programming in C++ (Elite)
- NPTEL — Programming in Java (Silver)
- NPTEL — Object-Oriented Programming (Silver)
- NPTEL — Data Structures & Algorithms (Completed)
- HackNexus 2026 — Hackathon Participant
